## Gastric Ulcers

### What is a Gastric Ulcer?

A [gastric ulcer](#), also referred to as a [stomach ulcer](#), is a break or raw, **eroded area in the normal tissue lining of the stomach**. People often believe that a gastric ulcer is the result of too much acid in the stomach. Unfortunately, this is not the case, and people with gastric ulcers do produce normal amounts of acid. It depends on **how well the lining of the stomach copes with the acid** because the stomach makes chemicals and mucus which covers the surface and protects the tissues from the acid.

[Gastric ulcers](#) are extremely common and affect about two percent of the adult population in the United States. They are most common in older men between the ages of 55 and 70.

### Diagnosing Gastric Ulcers

The [diagnosis of a gastric ulcer](#) is based on a physical examination, symptoms and medical history of the individual. Risk factors such as male sex, age, use of NSAIDs, history of **excessive use of alcohol and smoking** as well as the family history of ulcers will be taken into account. Additional tests such as an EGD (esophagogastroduodenoscopy) and biopsy will show a benign gastric ulcer. To check for a gastric ulcer, an upper GI series test will be performed.

### What Causes Gastric Ulcers?

A [gastric ulcer](#) is caused by an imbalance between the [stomach acids](#) and digestive juices which injures the protective mucus of the stomach lining. Gastric ulcers usually develop as a result of the **use of aspirin and nonsteroidal anti-inflammatory medications** (NSAIDs) such as ibuprofen.

The presence of bacteria called Helicobacter pylori (H.pylori), disorders that create **over secretion of stomach juices**, certain types of medication and an excessive intake of alcohol, tobacco and caffeine can also cause gastric ulcers. Many people experience periods of chronic ulcer pain alternating with symptom-free periods that may last for many weeks or even months.

### Risk factors for gastric ulcers

The risk factors for gastric ulcers include:

- Use of anti-inflammatory drugs (NSAIDs) such aspirin, ibuprofen and naproxen
- Alcoholism

- Smoking
- Chronic gastritis
- Aging
- Certain blood clotting problems
- Helicobacter pylori (H.pylori) infection
- Mechanical ventilation

## Symptoms of a gastric ulcer

The symptoms and [signs of a gastric ulcer](#) include:

- Indigestion in upper abdomen
- Heartburn in upper abdomen
- Abdominal pain
- Nausea
- Vomiting blood
- Blood in stools or black, tarry stools
- Weight loss
- Fatigue

## Help for Gastric Ulcers

A gastric ulcer may be treated with prescription drugs that will reduce the stomach acid secretion and protect the mucus tissue that lines the stomach. Treatment may also be recommended to **remove H.pylori bacteria** in order to avoid further recurrences of an ulcer. In cases where complications such as hemorrhaging or perforation of the stomach wall may occur, surgery is required.

Several lifestyle changes can benefit the individual with gastric ulcers to prevent a recurrence, and they include:

- Eat several, small nutritious meals a day at regular time intervals
- Exercise regularly
- Avoid unnecessary use of aspirin and NSAIDs
- Reduce your intake of coffee, tea and caffeinated beverages
- Stop smoking
- Reduce your intake of alcohol

## Natural remedies

Natural and holistic treatments are also highly effective in the prevention of stomach flare ups and digestion problems. While many synthetic and prescription drugs provide symptomatic relief, they also have harsh side effects. Herbal and homeopathic remedies, on the other hand, are gentle on the body's systems without any side effects.

Herbs such as Matricaria recutita, (German Chamomile) contain anti-inflammatory, anti-spasmodic and calming properties which are excellent for [digestive disorders](#). Filipendula ulmaria (Meadowsweet) is an anti-inflammatory, soothing digestive remedy which helps to **reduce the pain of digestive disorders** and ulcers. Ulmus fulva (Slippery Elm) is an extremely effective herb used in reducing digestive pain and irritation while also protecting and soothing the lining of the stomach and digestive tract. In addition, Sutherlandia frutescens

The advertisement for NativeRemedies features a green leaf logo at the top. Below it, the text reads "NativeRemedies THE NATURAL CHOICE". A green banner with white text says "LIVE A HEALTHY LIFE!". The central image shows a smiling family of four: a woman, a man, and two children. Below the image, the text states "Proven, Safe, 100% Natural Herbal and Homeopathic Remedies for You and Your Family". At the bottom, there is a brown button with the text "CLICK HERE".

## Michele Carelse, Clinical Psychologist

All of our natural remedies are formulated by our expert team of herbalists, naturopaths and homeopaths, and headed by Michele Carelse.

Michele has had years of experience in the manufacturing and use of natural remedies. In addition, she is a trained Clinical Psychologist and has been incorporating natural remedies into her treatment of patients with depression, anxiety, ADD, ADHD and stress for many years with spectacular results.

(Cancer Bush) has been used for thousands of years to treat chronic and acute digestive complaints, internal cancer and also acts as a powerful tonic.

## The Natural Approach

While Western medicine has become the norm in many cultures, it is not the only treatment option. Conventional western medicine, often called allopathic medicine, is the system of medicine taught at most medical schools and most pharmaceutical and synthetic medicines are manufactured and marketed according to the principles of allopathic medicine. Allopathic medicine is also sometimes called orthodox medicine.

Because most of us in the Western world have grown up in a society in which allopathic medicine is the prevailing norm, we forget that, only a few decades ago, homeopathic, herbal and other natural medicines were commonly available – and freely used even by conventional doctors. While there are often heated debates about which system of medicine is ‘better’ than the other, many responsible doctors (whether they are allopathic or not) recognize that both have a role to play in the treatment program.

Natural medicine has often been frowned on by conventional doctors, especially by those who did not have sufficient knowledge of these medicines. However, it is encouraging to note that some medical schools are now beginning to re-introduce it into their course work, thereby providing doctors with a wider range of treatment options from which to choose. In many countries, especially in Europe, India and China, natural and homeopathic medicines are commonly prescribed by conventional doctors and represent a significant part of the total annual drug sales.

Naturopathy is a branch of medicine (just as allopathy is a branch of medicine) which operates according to the underlying philosophy that the body has an innate capacity to heal itself. While natural medicines are often called ‘alternative’ or ‘complimentary’ medicines, they are, in fact, a unique and independent form of medicine in their own right, well able to treat a variety of conditions. Perhaps the term ‘holistic’ medicine is more apt, given the broad range of treatment options and approaches which are to be found within the practice of natural medicine, which encompasses many different disciplines, including herbalism, homeopathy, iridology, osteopathy, chiropractic, therapeutic massage techniques, aromatherapy, acupuncture and many, many more.

Most naturopaths will use a variety of treatment modalities in order to treat their patients in a holistic way to support health, relieve symptoms and prevent future disease. In fact, even the World Health Organization defines health as being "... more than simply the absence of illness. It is the active state of physical, emotional, mental and social well-being." This is a wonderfully clear description of holistic or natural medicine, which strives to support health (thereby relieving or preventing symptoms), rather than simply eliminating disease.

Although allopathic medicine certainly has a role to play and has made a tremendous contribution to medical science during the past century, there is a growing perception that it is not the only answer and that, in many cases, holistic medicine can accomplish just as much, if not more – without the risk of side effects, addiction and sacrifice to health so commonly associated with pharmaceutical drugs. Contrary to common perception, and provided that they are manufactured in the correct way, natural medicines can work quickly and safely to

promote healing.

In many cases, they can succeed where pharmaceutical drugs have failed. Despite frequent reports that they are 'unproven' and 'untested', the opposite is true. Natural medicines have a long history of usage and there is a wealth of empirical evidence to support their effectiveness and safety. In addition, active clinical research is carried out by many academic hospitals and universities to support the extensive traditional and empirical evidence behind natural medicines.

It is also important to know that, like any medicine, herbal and homeopathic medicines must be manufactured in the correct way, following acceptable procedures and manufacturing methods to ensure maximum effectiveness and safety. Due to the recent rise in popularity of natural remedies, many companies have sprung up to take advantage of the market. Unfortunately not all of them are equipped to manufacture to the correct standards, often resulting in a flood of inferior (and sometimes even unsafe) remedies onto the market – and giving natural remedies a bad name.

Even some pharmaceutical companies have rushed to claim their market share by producing so-called 'standardized' extracts of herbs and offering these as superior to the tried and tested methods of naturopathic manufacturing. Nothing could be further from the truth. While 'standardized' extracts may offer benefit of easy consistency of dosage (and cheaper more efficient production lines), they have grave disadvantages. These include an increase in side effects as the medicines produced in this manner lose the natural protective properties of the herbs. In some cases, these side effects have proved fatal – as was seen in the liver toxicity associated with standardized extracts of kava kava, a herb previously safely used for generations without any known side effects.

Most naturopaths recommend what is called the Full Spectrum Method of extraction – which retains the benefits of ALL the active ingredients within the herb as opposed to isolating only one – thereby providing a more complete treatment as well as superior protection against side effects.

Whatever your choice, always choose wisely. Research what is best for you. If you have a chronic or life threatening condition, don't make changes without first discussing them with your doctor in order that your condition may be monitored. Well informed and supportive practitioners will support patients who want to take responsibility for their own health.
